

INFORMATION SECURITY POLICY

DQE is a company specializing in data quality management solutions. We provide solutions that are either in SaaS mode or hosted on the customer's premises, enabling the input, control and correction of data that includes postal addresses (address cleansing), email addresses, and telephone numbers.

As we are aware of the stakes involved in handling the personal data we process, we have decided to implement an Information Security Management System to comply with the requirements of the ISO 27001 international standard.

To meet the various applicable requirements and the expectations of our stakeholders, as well as ensure an appropriate level of information security, we are committed to:

- Providing the resources needed to implement and maintain compliance with ISO 27001:2013 by adopting a continuous improvement approach;
- Clearly defining information security roles and responsibilities for our staff;
- Ensuring compliance with contractual, regulatory, legislative, and business-related requirements.

Through the ISMS manager's systematic monitoring, we aim to:

- Protect customer data by maintaining confidentiality, integrity, and availability
- Ensure compliance with legal and regulatory requirements governing the processing of personal data
- Guarantee that deployed solutions are kept up to date to maintain a high level of security and prevent intentional breaches
- Ensure the availability and resilience of services provided to customers through a proactive approach aimed at achieving a high level of customer loyalty
- Guarantee a high level of involvement and vigilance on the part of DQE employees with regard to information security.

DQE's management is committed to ISO / IEC 27001 as the model for information security governance, to aligning its activities with the risk management context to which the company is exposed, and to promoting the continuous improvement of the information security management system.
